

Blockly Games

Blockly games was introduced as a replacement for Kahoot for meantime. Blockly games was new to me. I mean I've never visited that page before nor didn't am aware of its existence. This may be the reason why I got curious and tried it. First level, puzzle was easy like a kindergarten challenge. However, things get more challenging starting from maze up to turtle. I was amazed of its concept "programming". I became excited to play while being able to fix the program, its like learning while enjoying. Also, because it is new for me there's an urge for me to explore it. Also, because it is challenging especially when ° of angle in directions started to appear and concept of bird level. As it is challenging it made me nervous because I am ware that aside from not being "techy", I'm also not into angles especially applying to directions so yeah hehe indeed it is really challenging for my programming and mathematical skills. However, it is a good thing as it challenged me and helped me to familiarize the logic of angle in those 10 stages. Also, since was really challenging, surpassing it is fulfilling and its like you can finally breath for the level haha.

Experiencing blockly games may be difficult but isn't a bad experience because after all its exciting, challenging, and is really connected to subject. Therefor doing it lets us somehow enjoy our self because we play while learning. Blockly games was a good experience in this subject and would gladly recommend it to others who's interested.
