

Third Week of Learning: October 22&25, 2019

For the first meeting of the said week we discussed the pseudocodes and was mandated to create/apply the 3 activities, applying it to flowgorithm that is quite new for me and is quite many that it will surely require a lot of time to study and run a smooth program. On the last meeting of the week we were not able to have a class due to SOM Week. It is our privilege that the professor for this subject let us participate in the event that is Dementia: Battle of the Witz. In the said event we were able to play using Kahoot as the medium of game in which it is more challenging because of the general questions and also there are lots of participants therefor the competition is strong. However, it was a great time for us to interact with other students under SOM, this gave new knowledge, and experience that aware and excites us. Addressing the question, I am a representative of the section and am not directly involved in the events but partially contribute in organizing the dress codes and the order for the shirts of event that is not involved in the span of time of this subject at that time and was able to fully participate in the game. On the last day of the said week was a holiday reason why we don't have a class

In conclusion, the last topics and activities left to do is quite difficult for me and due to postponed/interrupted meetings I find it more difficult because I wasn't able to have a self-study towards it resulting for me to have flood of pending tasks.
