

**R8 - My ProgCon Class Experience**

The class started with the introduction of the mediums that we will use all through out the term. These mediums including GitHub, Trello, and Kahoot. The introduction of Trello isn't new to me that day at I was able to use it but eventually ended using it because I find it complicated to use. However, because of this class I found out how to use it and is really good to organize things out. Also, I really enjoyed having a quiz through Kahoot because it has a vibe of being playful that lessens the tense when we have low scores and/or unknowingly winning the game, which is really a great experience that I wanted to feel again if ever given a chance.

Also, we started the class with drawing out flowcharts then later, applied it to a software which is flowgorithm that is more detailed and immediately enables us if the program works or not. The pace of it is favorable for me because we started mastering the basics that helped us/ me to know the basic usage of flowgorithm. Every submission made there's pseudocode attached that is also helpful because simply shows the details of flowcharts/ flowgorithm.

We also played blockly games in which is really challenging as the level goes by. However, because it is challenging therefore surpassing it was really fulfilling. Its amazing how the creater came up with this idea that I'm sure will benefit programmers because it is a game with enhancing their capability.

For me the prof maximized the mediums in handling its students' performance wherein we also used lms for exams and encouraged us to watched linked in where in the goal is for us to have a personal growth that is really thoughtful. Thank you for your care and considerations. Indeed, this class has lots of things to do but it became worth it as you let us have time to deal with it, to cope up and also because of this we will leave this class with learnings inclined for the subject. Thank you for a wonderful class especially when we have Kahoot quiz and also for playing music that relaxes us when things are getting busy inside the classroom. Thank you for letting us eat and asking us simple questions like "okay ka lang?" you asked me twice, first when I wasn't able to attend your class and when I with my haggard face. Sincerely, thank you for letting us learn and being caring. I am hoping for this subject's best and so do for the prof.
