

Second Week of Learning: October 15 & 18, 2019

First meeting of the class for this week was the discussion of one of what we have researched in October 11, 2019. The flowchart research helped me to at least refresh my knowledge regarding the topic. However, was taken aback again when we are challenged to apply it wherein I had a hard time understanding what we have to do and this continued in making the flowchart for “Area of Circle” in which I don’t have any knowledge in its formula making it harder for me to cope up. It is a good thing that it became our homework and because of it, I was able to make a research about that matter where I understand therefore making me able to create a flowchart. The next meeting we continued the discussion in flowchart wherein working on its improvements is applied and was eventually became our homework again that is helpful for me for there are really has room for improving our work more. Also, in Kahoot we were able to play by team that created a new experience for us and I became more excited and I preferred it more because it allots time before letting us choose our answer making us able to monitor the time countdown that eventually helped us a lot to answer faster hehe. Also, that is one of the grouping experience that I enjoy and will enjoy hehe. On the other hand, it was also good that my request was granted, a course syllabus.

I am looking forward for more exciting experiences in this class and I am hoping that we will have a normal phase of discussion especially when we also have to apply it at the same time as I am not computer literate just like what we previously did wherein there’s a discussion and we have an open time for asking regarding our work and the others see it because it also enables us to see what our work lacks off. Thank you for understanding and have a nice day ahead hehe.
